

LAME FONTS

Lame Fonts is a showcase for the web's most undesirable typefaces. The single-serving web page is built upon the [Google Fonts API](#). The page fetches two directories of all available typefaces—one is sorted by popularity and the other is sorted by trendiness. The 4 least popular and 4 least trendy types are presented. From sketches on paper to wireframes and mockups, the end result is a mobile-first, responsive web page with dynamic content.
